

ABSTRACT OF THE DISCLOSURE

A mounting arrangement for an automobile heating core includes a dash panel defining a boundary between a passenger compartment and an engine compartment. The heater core is positioned in the passenger compartment. An inlet pipe extends between the dash panel and the heating core and delivers fluid to the heating core. An outlet pipe extends between the heating core and the dash panel and delivers fluid away from the heating core. A fluid collection member is positioned in the passenger compartment and arranged to collect fluid leaking from the inlet and outlet pipes.
